

# SLIMLINE VENTS

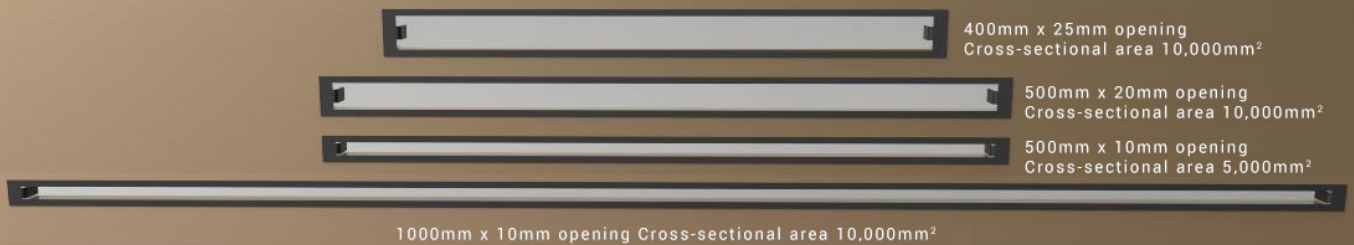

## Installation Instructions

These vent covers come in 5 standard sizes and while intended primarily for the internal air venting requirements for Gazco fireplace chase/cavities, they may be used quite satisfactorily in other internal applications.

These vent covers are a simple flat trim plate, made from light steel plate that have been laser cut to size and powder coated in black. They are simple to use and install and make for a neat slimline aperture in a wall, at both architrave and/or skirting levels to make them as unobtrusive as possible.

The standard sizes are as follows but may be added to as demand dictates;

- 40cm x 2.5 cm – cross sectional area 100cm<sup>2</sup>
- 50cm x 2.0 cm – cross sectional area 100cm<sup>2</sup>
- 100cm x 1.0cm – cross sectional area 100cm<sup>2</sup>
- 50cm x 1.0 cm – cross sectional area 50cm<sup>2</sup>
- 30cm x 2.0 cm – cross sectional area 60cm<sup>2</sup>

(NOTE: As a cross sectional area check/guide a 100mm diameter round vent has a cross sectional area of 78.55cm<sup>2</sup>)

# Installation Instructions

Installation is very simple and straight forward;

- Cut a slot into the wall at the desired location to the required length and height.  
The peripheral trim on each slimline vent cover is 5mm wide
- Bend out the two end flaps of the vent so that they face inwards into the vent hole
- Use a suitable adhesive and tab on the ends and along the inward frame face
- Insert into the cut vent hole ensuring the adhesive has properly taken and secured the cover
- Once the adhesive has set, the cover may be painted over as required to the wall colour.
