

Gazco Studio 2 Slimline, EchoFlame Black Glass lining, Log fuel bed & Black Glass frame

A Slimline fire for exterior wall installation

Gazco Studio Slimline fires offer all the distinctive hallmarks that are synonymous with the Gazco Studio range, with the added benefit of a slimmer firebox designed specifically for a simple exterior wall installation (needs only 155mm cavity depth).

Available in two sizes, both come complete with a dedicated rear exit balanced flue termination kit for easy installation.

Increasing the appeal of one of Gazco's most innovative gas fire ranges, Zero Clearance Kits have been introduced to allow homeowners to install either the Slimline 1 or 2 fires into an opening or enclosure constructed from combustible materials. The ZCB will also allow installation into conventionally constructed walls without the need to remove plasterboard from adjacent surfaces.

Compact and elegant in design, these highly efficient fires have a generous heat output which is easily controlled with the Programmable Thermostatic remote control.
