Indoor Gas | Decorative Heat

Jetmaster 1050 Inbuilt Gas fire

A warm traditional fire, with a proven New Zealand pedigree

In 1950, a bright young South African engineer introduced a very clever design for a convection open fireplace, built from steel, which endures in its very simplicity and form to this day.

Jetmaster fires warm the room in two ways: though radiated heat directly off the fire and through convection technology. The convection heating system draws cool air beneath the fire bed and releases it back in to the room as hot air from the top of the fire.

All fires come with the coal fuel bed as standard, with the ability to further dress the fire with optional logs. You can further enhance the fire with optional brushed Stainless Steel trim or Picket Fence front.

Key Features

Jetmaster Gas

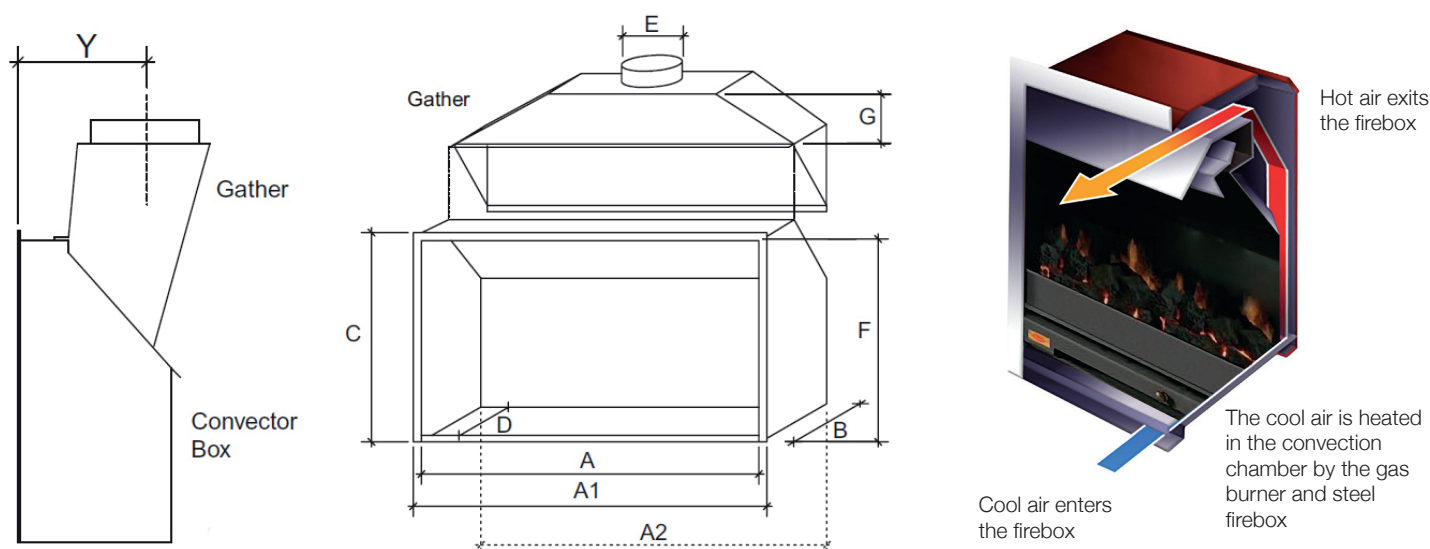

✓	 LPG
✓	 NATURAL GAS
✓	 ELECTRONIC REMOTE
✓	 OPTIONAL TRIM

Jetmaster Gas Technical Information

PRODUCT DIMENSIONS (mm)

Model	A	A1	A2	B	C	D	E	F	G	Y
700	700	800	750	341	650	290	200/250	630	265	280
850	850	950	900	341	650	290	250/300	630	265	280
1050	1050	1150	1100	341	570	290	250/300	550	265	280

Dimensions in mm

Jetmaster's original design increases the heating capacity of a normal brick or stone fire by as much as five times.

The information on this brochure is to assist you in your choice of a suitable Jetmaster fire. This is not intended to be all the information required to install your fire. This can be obtained from your local Jetmaster retailer or you can download the full and current installation instructions from: thefireplace.co.nz
