Fire Your Imagination

Studio

In-Built Convector and Zero Clearance Freestanding models

Instructions for Servicing & Maintenance

For use in NZ (New Zealand)

These products are tested in accordance with AS/NZ 4012:2014, AS/NZ 4013:2014 and AS/NZ 2918:2001 and comply with the NZ NES and ECAN Emissions requirements.

All installations must be carried out by an S.F.A.I.T (Solid Fuel Authorised Technician).

In New Zealand, the Studio must be bolted through to the hebel or base to comply with the seismic restraint provisions of AS/NZ 2918:2001

IMPORTANT

THE OUTER CASING, FRONT AND GLASS PANEL BECOME EXTREMELY HOT DURING OPERATION AND WILL RESULT IN SERIOUS INJURY AND BURNS IF TOUCHED. IT IS THEREFORE RECOMMENDED THAT AN APPROVED FIREGUARD IS USED IN THE PRESENCE OF YOUNG CHILDREN, THE ELDERLY OR INFIRM.

CAUTION: THIS APPLIANCE SHOULD BE MAINTAINED AND OPERATED AT ALL TIMES IN ACCORDANCE WITH THESE INSTRUCTIONS.

Keep them in a safe place for future reference and when servicing the fire.

Warranty

For purchases outside of the United Kingdom, Republic of Ireland, France, Belgium and the Netherlands, please consult your Stovax retailer for the warranty available in your region.

The Riva Studio 2 NZ has been authorised by the Environment Canterbury as meeting the emissions and efficiency criteria. Ecan Authorisation Number: 133649

Maintenance & Servicing

1. Annual Service

1.1 Before the start of the heating season strip, inspect and clean the appliance as detailed:

—Allow appliance to cool.

—Remove all internal parts: baffle, (s) log guard and firebricks (see *Installation Instructions, Pre-Installation Sections 3, 4, 5 & 6*). Take care handling firebricks as they can become fragile after a period of use.

—Sweep the appliance at this point if necessary.

—Vacuum clean any remaining ash and debris from the inside of the appliance. Stovax offer a filter/collection attachment for vacuum cleaners to protect them from fire ash: Ash Clean (Stovax Part No. 2091).

—Check the parts for any damage. Replace any damaged parts using genuine Stovax replacements parts.

— Check and clean the firebricks with a soft brush.

Some surface damage will occur during use. The life of the bricks will depend on the type of fuels burnt and the level of use. **Replace damaged bricks as soon as possible.**

—**Do not use acidic cleaners on printed glass.**

— Re-fit cleaned internal parts.

— **Do not use cleaning agents that have a high alkaline content, for example Stovax Gel Cleaner, on appliances with painted glass. These are abrasive cleaning agents that are designed to be used with heavily stained clear glass. Use Stovax Glass Cleaner (Stovax No.4103) on more delicate surfaces.**

Do not use abrasive cleaners to remove tar or soot deposits from the glass.

—Fit new door rope seal (see Maintenance and Servicing, Section 4).

—Lightly oil the door catch mechanism and hinge pins. Avoid getting oil onto the door seals and glass.

—To refresh painted finishes use Stovax Riva Midnight black paint.

1.2 Use genuine Stovax replacement parts to keep the appliance in safe, efficient working order.

1.3 For more information about the Stovax Group products please visit our web site at: **www.stovax.com**

1.4 Burn at a low temperature for the first day of use after any maintenance. This allows the seals, fixing glues and paint to fully cure.

1.5 During this time the appliance may give off some unpleasant odours. Keep the room well ventilated to avoid a build-up of fumes.

1.6 Your Stovax dealer can carry out service and maintenance.

This is a list of the maintenance products that may need be required:

Task	Product name
Preventing build-up of creosote in flue	Protector (15 sachets)
	Protector (1kg tub)
Sealing flue pipe joints	Fire Cement (500g tub)
	Fire Cement (600g cartridge)
Re-painting	Riva Midnight Black (150ml aerosol)
Protecting your hands	Heat resistant leather gloves
Door sealing rope	16x10 Flat Rope Handy Pack
	Ø13 Rope Seal Handy Pack
	16x10 Flat Rope 25m Roll
	Ø13 Rope Deal 25m Roll
Thermic seal glue	(50ml bottle)
Ash Clean	Vacuum Cleaner Attachment

These products, available online at **www.stovax.com** or from your local Stovax dealer, along with regular maintenance and use of correct fuels, will keep the appliance in the best possible condition.

Maintenance & Servicing

Note: In order to service the Freestanding models it will be necessary to at least partially remove the Zero Clearance Box outer wrap.

For Zero Clearance Box assembly guidance see Instruction Manual PM1269NZ.

2. Removal of Internal Parts

- 2.1 To service and maintain the good working condition of your appliance it will be necessary to remove several internal parts. Consult the installation instructions to remove the:

Door
Log Guard
Firebricks
Baffle Bricks
Baffle Plates
Flue Collar
Airbar
Louvres

3. Fitting a New Door Glass

- 3.1 To maintain safe use of your appliance you may need to replace a damaged door glass. A replacement glass panel can be ordered which will be supplied with full fitting instructions:

Studio 2 - RVS-CE7477

4. Fitting a new Door Seal

- 4.1 To maintain the safe use of your appliance you need to replace damaged or worn door sealing rope. To complete this operation remove the door see Section 2 Removal of The Door in the Pre-Installation section of the Installation manual.

- 4.2 Remove the old rope and scrape old glue from the locating groove. Clean the locating groove with a clean dry cloth to remove all old dust and debris.

- 4.3 Squeeze a generous bead of fresh Stovax Thermic Seal glue into the rope locating groove.

Press the new Stovax rope into the locating groove, placing the joint in the middle of the top edge of the door using tape supplied for the ends.

- 4.4 Refit the door and close the door to apply pressure to the new rope.

Leave the appliance closed for at least 12 hours before lighting the appliance and using at a low output for approximately one day.

- 4.5 Using the appliance with a damaged door seal can cause dangerous fumes to enter the room, or the appliance to over fire, resulting in damage.

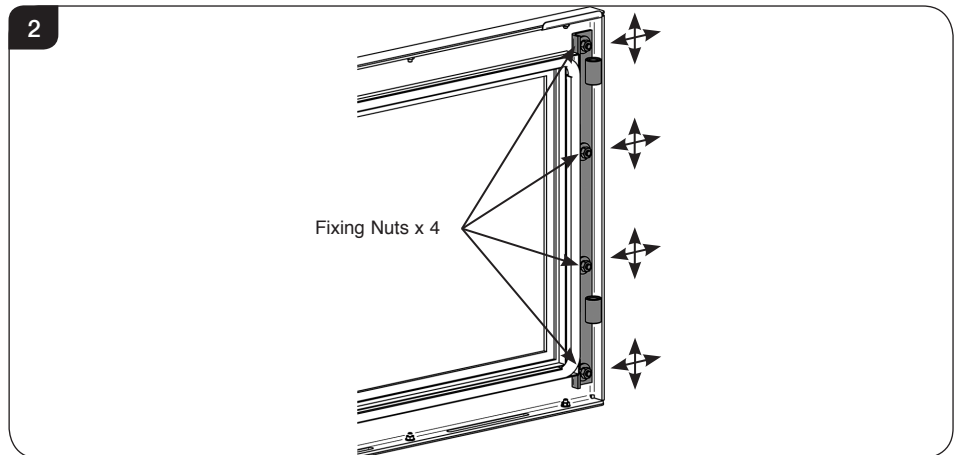

Maintenance & Servicing

5. Adjusting Door Hinges

- 5.1 To maintain the safe use of your appliance, you may need to adjust the door hinges to ensure the safe, correct closing of the door. The door must be horizontal/level with the top of the inner box and the door catch engages correctly.
- 5.2 Adjustment is possible in 2 places:
Door Hinge Assembly
Hinge Blocks on Inner Box
- 5.3 Open the door to give access to these 2 positions.

Door Hinge Assembly

- 5.4 Use a 10mm socket to slightly loosen the fixing nuts on the Door Hinge Assembly, see Diagram 2.
- 5.5 Loosening the Door Hinge Assembly allows for fine vertical and horizontal adjustment of the door position. This may require a trial and error approach to find the correct position. Ensure the door is horizontal before tightening the fixing nuts.

Hinge Blocks on Inner Box

- 5.6 Using a 10mm A/F spanner slightly loosen the fixing nuts inside the stove as shown in Diagram 3. This will give vertical and horizontal adjustment which may need a trial and error approach to find the correct position. The door must be horizontally level.

6. Adjusting the Door Catch

- 6.1 To maintain the safe use of your appliance you may need to adjust the door catch to ensure the safe, correct closing of the door. If the door hinges have been adjusted the door catch may need adjustment.
- 6.2 The catches are located at the top and the bottom of the right side of the door.

Maintenance & Servicing

6a.3 The top and bottom catches will need to be adjusted separately and in the same manner.

The catch block can move in two directions, see Diagram 5, 6 & 7.

Sideways Adjustment

Using a 10mm A/F Spanner loosen the 2 nuts that hold the catch block to the door.

Do not remove the nuts completely. This will allow some movement left or right to suit.

Tighten the nuts and recheck the catch operation.

In and Out Adjustment

Loosening or tightening the M6 screw and the nuts on the catch block will cause the catch to move in or out from the door and allow the hook to gain better purchase on the door rollers.

Do not remove screw or nuts completely.

6a.4 **To move Door Catch in:**

Loosen Nuts 1 & 2.

Wind screw **IN** until the Door Catch is in desired position.

Tighten Nuts 1 & 2 down to Catch Block.

6a.5 **To move Door Catch out:**

Loosen Nuts 1 & 2.

Wind screw **OUT** until the Door Catch is in desired position.

Tighten Nuts 1 & 2 down to Catch Block.

Do a Paper Test

To do a paper test shut a piece of paper in the door at the edges to test how well the rope seal stops the air from entering the appliance. If the paper can be pulled out easily then the seal is not sufficient and the rope must be replaced. Repeat this around all the edges of the stove.

Tighten the top and bottom screws and recheck the catch operation
